## 1 Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed and key publications cited (Einstein, 1905).

Finally, briefly mention the main aim of the work and high-

light the principal conclusions.

## 2 Material

This section may be divided by subheadings.

### 2.1 Materials

## 2.2 Processing techniques

Main headings should be informative, use 9 point Arial font and capitalize the first letter of all words.

For Level 2 headings, use justified 9-point Arial font and capitalize the first letter

Section headings can be typeset with and without numbers (D. Knuth, n.d.).

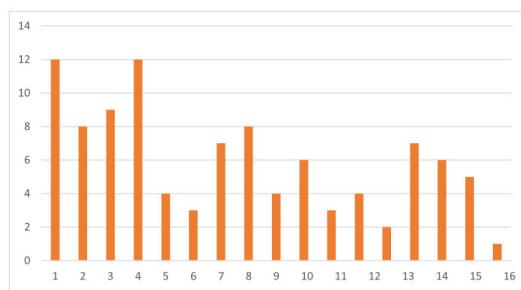

### 2.2.1 This is the subsubsection style.

These headings should end in a full point.

## 3 Graphics and tables

### 3.1 Graphics

Graphics should be inserted on the page where they are first mentioned (unless they are equations, which appear in the flow of the text) (Dirac, 1981).

**Fig. 1** An example figure caption.

### 3.2 Tables

Tables typeset in RSC house style do not include vertical lines. Table footnote symbols are lower-case italic letters and are typeset at the bottom of the table. Table captions do not end in a full point (Dirac, 1981; Einstein, 1905; D. E. Knuth, 1973).

**Table 1** An example of a caption to accompany a table – table captions do not end in a full point

Header one (units)	Header two	Header three
1	2	3
4	5	6
7	8	9
10	11	12

Adding notes to tables can be complicated. Perhaps the easiest method is to generate these manually.

## 4 Equations

Equations can be typeset inline e.g.  $y = mx + c$  or displayed with and without numbers:

$$A = \pi r^2$$

$$\frac{\gamma}{\varepsilon x} r^2 = 2r \quad (1)$$

You can also put lists into the text. You can have bulleted or numbered lists of almost any kind.

Lists are easy to create:

- List entries start with the `\item` command.
- Individual entries are indicated with a black dot, a so-called bullet.
- The text in the entries may be of any length.

The `mhchem` package can also be used so that formulae are easy to input: `\ce{H2SO4}` gives  $H_2SO_4$ .

## 5 Conclusion

The conclusions section should come in this section at the end of the article, before the Author Contributions or References.

## Author Contributions

We encourage authors to include author contributions.

## Acknowledgements

The Acknowledgements come at the end of an article after Conflicts of interest and before the references.
